

Address Book Import/Export Files

The Address Book application should support importing and exporting tab-delimited (.tsv) file formats. An overview of the tsv format can be found here:

<https://support.google.com/drive/answer/63377>

Any implementation of the Address Book should accept addresses in the USPS standard format (<http://pe.usps.gov/text/pub28/welcome.htm>) beginning with a standardized Last Line. The header line should begin as follows:

Last <tab> Delivery <tab> Second <tab> Recipient <tab> Phone <NL>

Where the fields are given by:

Last: USPS Last Line standard (CITY STATE ZIP)

Delivery: USPS Delivery Address line standard (e.g., 1401 SW MAIN ST)

Second: second address line as needed, may be blank

Recipient: Recipient line (e.g., John Doe)

Phone: phone number

Fields may be blank. Versions developed to support additional information must retain the formatting standard for the fields given above.
